To have the PowerBI file working properly in your machine you need to be sure it can find the data. Therefore, it is necessary to update the location of your data files. For this perform the following steps:

1. Click on **Data source settings**

2. Select the location of the file you want to change the location

3. Click on **Change Source**

4. Browse the new location of the file

5. Select file

6. Click **Open**

7. You'll be back to previous page. Click **Ok**

8. Repeat the process until all files have the location updated

9. Then click **Close**

10. Remember to **Close & Apply** !
